

optilube.™

sterile lubricating jelly
water soluble

OptiLube sterile lubricating jelly is a medical device, developed to aid the smooth insertion of medical devices during a range of examinations and procedures.

The use of sterile lubricating jelly during procedures and examinations reduces the risk of pain and trauma to the patient, by reducing resistance of the equipment as it is inserted.

Our range of formats allows the clinician to select the size most suitable for the procedure, reducing product waste and promoting best practice infection prevention with the use of our single-use formats.

OptiLube is **water-soluble, transparent,** and formulated to adhere well to gloves and instruments.

*"Choosing the **OptiLube** range has been a great decision for my practice and patients. The gel is high quality and consistently performs extremely well on all of the many procedures it is required for."*

Dr Donna Kershner, York, UK

*"I had cancer and my voice box was removed so I have to breathe and voice through a hole in my neck called a stoma. This became very sore and I was unable to insert the stoma stud which as you can imagine was not ideal. I became very frustrated and down in the dumps however I then discovered **OptiLube**. I now use **OptiLube** 5g sachets several times a day and I can't thank **Optimum Medical** enough - **OptiLube** has changed my life."*

Desmond Birch, Cheshire, UK

Sterile, single-use sachets

2.7g^e 5g^e 20g^e

PR Code	Size	PIP code	NPC Code	Inner Pack	Outer Pack
1123	2.7g	NA	NA	144	1440
1120	5g	357-8275	FTM 306	150	1500
1119	20g	NA	NA	20	200

OptiLube sterile lubricating jelly is available in 2.7g, 5g and 20g sachets. Our sachets are easy to open and designed for procedures requiring a smaller volume of lubrication.

These single-use sachets promote best practice infection prevention and aid in reducing cross contamination between patients. And have a shelf life of up to 5 years.

Our 20g sachet is supplied double-wrapped and is sterile inside and outside the sachet.

Larger volume tubes

42g^e 82g^e 113g^e

PR Code	Size	PIP code	NPC Code	Inner Pack	Outer Pack
1121	42g	357-7012	FTM 294	12	72
1122	82g	357-8283	FTM 299	12	72
1127	113g	NA	FTM	12	72

When more lubricant is required, we offer OptiLube sterile lubricating jelly in 42g, 82g and 113g tubes.

Our tubes are designed with a flip-cap to allow easy opening and closing when reapplication is required.

OptiLube tubes are supplied sterile and remain sterile until opened. Once opened they have a shelf life of up to 3 months.

Unique large flip-cap enables the tube to be opened easily.

Smaller volume

5g^e 10g^e

PR Code	Size	PIP code	NPC Code	Inner Pack	Outer Pack
1124	5g	362-8856	FTM 293	48	480
1114	10g	NA	NA	30	300

We offer a 5g and 10g tube. Our 10g tubes have a wider opening than the other tubes in our range.

Tubes with a difference

5g^e 15g^e

PR Code	Size	PIP code	NPC Code	Inner Pack	Outer Pack
1140	5g	NA	NA	36	360
1141	15g	NA	NA	24	240

OptiLube Reach is our tube with an elongated nozzle, designed for use during procedures where precise application of sterile lubrication is required.
